The gap in the provision of micronutrient premix occurred because the premix delivered in July 2009 contained Vitamin D erroneously, and program managers wanted to document Vitamin D deficiency through a national micronutrient survey conducted in 2010, so that deficiency rates could serve as a national baseline.

External Mill Monitoring of Wheat Flour Fortification ...

The fortification of wheat flour with micronutrients is a common strategy to increase vitamin and mineral intake and is included as a key component in national health and nutrition strategies [1].As part of a national fortification program, a country's milling industry is often required to add micronutrient premix in defined doses to the flour (typically wheat or maize) they produce.

1. Introduction

The survey is an opportunity to update and provide accurate information to guide decision-making and programme design to improve micronutrient status. Furthermore it will serve as a baseline for key indicators in the National Food and Nutrition Security Implementation Plan.

Preparations to conduct National Micronutrients Survey ...

The National Micronutrient Survey, however, showed a more detailed picture of the vitamin A deficiency prevalence in Zimbabwe [15]. The survey showed that 35.8% (n=346) of children 12-71 months had vitamin A deficiency, with serum retinol levels below 0.70[micro]mol/L. Among schoolchildren of 6-14 years age group VAD prevalence was 18% (n=657).
